

## Diode Insurance

**5 years  
for TruDisk laser  
diodes**

### The advantages for you at a glance:

- **Reliable cost calculation**
- **No loss in process quality**
- **Simple diode replacement**
- **Long-term laser stability**

**100%  
Laser stability**

## Diode insurance

The diode insurance offers you the opportunity to make your production costs more predictable and optimize how you calculate your operating costs. Benefit from increased safety and cost transparency for your TRUMPF laser systems.

## Reliable cost calculation

During the insurance period, you will not incur any material costs for diode failures diagnosed by TRUMPF. This means you can reliably plan your costs and you will not incur any unexpected additional costs in production.

## Simple diode replacement

In the event of failure of a pump diode module during the insurance period, you will receive a new pump diode module from TRUMPF. Prompt diode replacement on site at your location is quick and simple: it takes a service engineer just minutes to complete.

## Long-term laser stability

The insurance period begins with the start of the machine warranty and has a duration of 5 years. You therefore enjoy optimum protection of your diodes during the entire 5-year-period and can rely on long-term laser stability.

## Consistently high beam quality

With TRUMPF TruDisk laser in combination with the TRUMPF TruLaser Cell machines, replacing diodes has no effect on beam quality, focusing or cutting properties. You benefit from a consistently high processing speed as well as a permanently high cutting and welding quality - even after diode replacement.

**100%  
satisfaction**
