## The World's Shortest Tool-Spindle NT Smart Cube

The world's shortest tool spindle in its class. Thanks to the ultra-compact size of the Tool Spindle, interference is reduced, and a wider machining area is ensured.

### ■ Tool Spindle (NT Smart Cube)

### ■ Bar capacity Φ65 / Φ71mm (op.) / Φ80mm (op.)

L-spindle motor	<b>15/11kW</b> <b>18.5/15kW (op.)</b> *For φ80, only 18.5/15kW. <b>4,500min<sup>-1</sup></b> <b>3,500min<sup>-1</sup>(op.)</b>
-----------------	--

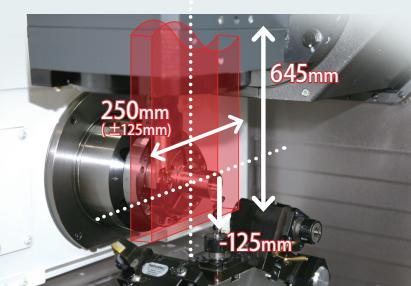

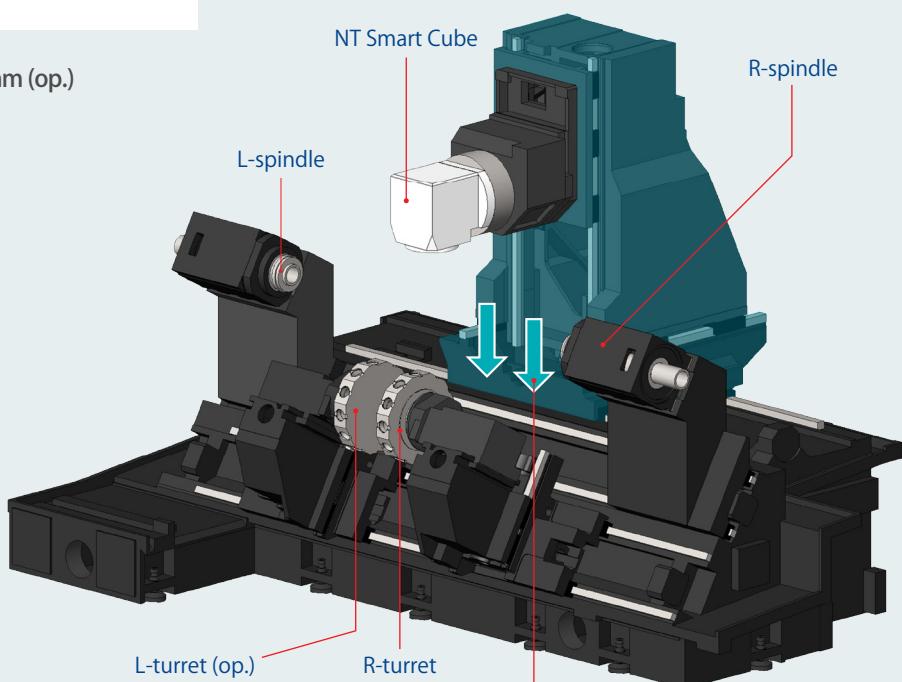

### ■ Bar capacity Φ65 / Φ71mm (op.)

R-spindle motor	<b>15/11kW</b> <b>4,500min<sup>-1</sup></b> <b>3,500min<sup>-1</sup>(op.)</b>
-----------------	---

### L-lower turret(op.) & R-lower turret

#### ■ Y-axis travel 80mm (±40mm)

Milling spindle motor	<b>5.5/3.7kW</b> <b>6,000min<sup>-1</sup></b>
-----------------------	--

### High accuracy milling

Thanks to large Y-axis travel and 125mm X-axis travel beyond the spindle center, various machining operations can be performed without rotating the C-axis, such as square milling in the X-Y plane or deep hole drilling in the X-axis direction, ensuring faster cycle time and higher precision.

### Vertical column structure

Strong and stable structure, where the load is evenly applied.

# Machine structure

*168 stations*

Up to 168 tools available !

In addition to 120 qualified ATC Tools for the Tool spindle(Op.), up to 24 × 2 tools can be mounted on the lower turrets.

## ATC Maintenance Navigator

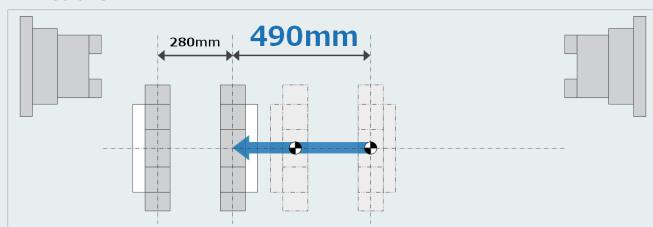

In addition to information about the ATC status and position of the Alarm, the step by step ATC recovery guidance screen, ensure fast ATC recovery and shorter machine down time.

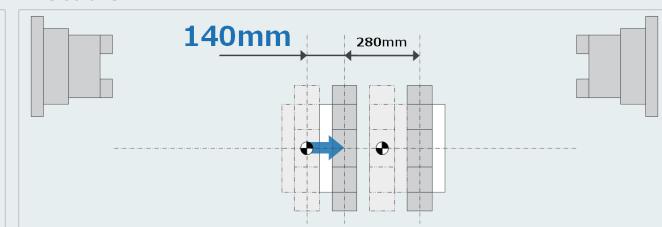

## Cross Over Travel for Lower Z-axis (op. L lower turret)

When one turret is retracted in the Z-axis direction, the other turret can advance beyond its Z-Axis reference point, ensuring a larger Z-axis travel. This greatly increases the machining range of the lower turrets.

The chuck open / close position is set on the NT Smart X screen.  
Setup time and machining cycle time are reduced.

### One Touch MDI

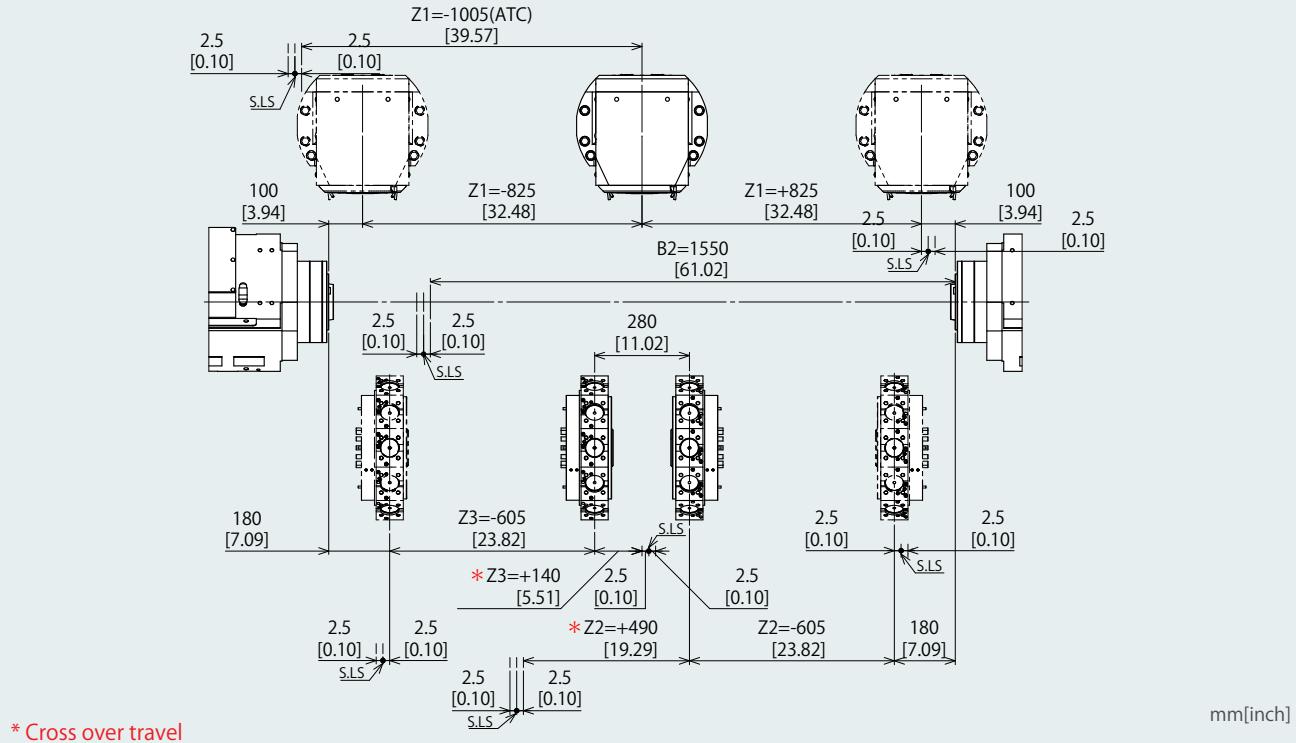

This function is to register in advance frequently used cycle programs such as home position return and tool exchange, and call with one touch.

Reduce programming and setup time, while eliminating input errors.

## ● Safety quality specifications

Various interlocks, such as safety fences, auto extinguisher devices, and other safety related equipment may be required. These have to be selected during the configuration of the machine.

- ① Safety devices include electromagnetic door lock, chuck interlock, hydraulic pressure switch, air pressure switch, short circuit breaker and quill interlock. (Door interlock and chuck interlock are standard equipment.)
- ② In case of automation, various safety fences may be required, such as work stocker safety fences, robot safety fences, ...etc.

During the configuration of machine specifications, please discuss these requirements with the Nakamura-Tome machine sales representative.

## ● Precautions on the use of cutting fluids and lubricating oils

- Some types of cutting fluids (coolant) are harmful to machine components, causing damages such as peeling of paint, cracking of resin, expanding of rubber, corrosion and rust build up on aluminum and copper.
- To avoid causing damage to the machine, never use synthetic coolants, or any coolants containing chlorine. In addition, never use coolants and lubricating oils which contain organic solvents such as butane, pentane, hexane and octane.
- Machine warranty terms are void for any claims or damage arising from the use of inappropriate cutting fluids or lubricating oils.
